Designed for tablet devices Story-based RPG Gameplay: The game is a classic turn-based JRPG style, but with a story-driven plot and many more sidequests to do. The hero's main goal is to defeat the evil organization leader and try to save the world from an invasion of monsters. You're the main character from a fictional Earth-like planet called New Earth. On this planet you were raised by a robot named DINOBOT instead of your mother and father. In this adventure you'll meet a bunch of friends and will have to deal with them as you progress through the game. History: Hello everyone, I wrote the Mark After Dark game just to share my love for classic-styled adventure games, and as a side project for a year now (with some help from my girlfriend, Leanna). Mark After Dark is the story of a special character called Mark, who is not like the other people around him. He's a bear, wearing a suit, who wears his special bag on his head all the time. He is a very interesting guy, but he has nothing else to do but to look for the girl of his dreams. He does not know her name, address, or even really her gender. You, the player will play as Mark and help him along his journey to find this special person. The game was released in 2014 as a free, click-to-play, adventure-style game. It has the feel of classic RPG games, with a story-driven plot, sidequests and some item-gathering/crafting. But, instead of battling a lot of people and fighting baddies, you do meet many new people and go on adventures with them. In the game there are 3 main endings, the good ending, the bad ending and the "longer" one. Mark After Dark got a lot of praise and love from the critics, and it got many 5-star ratings. The reasons for this are: - 3 different endings - Funny dialogs and jokes from Mark in the story and in the dialogs - Funny characters - Original art-style - good value for the price And now I finally managed to release Mark After Dark in English, so I hope you like my first language. And if you didn't like the game, I'd appreciate it c9d1549cdd

What's new:

The Color by Number ("Color Paint") genre emerged in the late 1980s as artists sought a way to combine a number of different material effects, such as painting or collage, with 3D elements. Originally conceived in Europe, the term "Color by Number" also refers to technical software incorporating low-dimensional combinations of shapes and textures, typically used to annotate 3D models. History The lineage of modern 3D color by number artwork goes back to the late 1960s and early 1970s innovation of Jack Welu, who started a visual research and design studio in New York. Welu, a cellist, violinist, and harpist, was inspired by the work of Mira Schendel and Henri Cartier-Bresson, and used writing and collage to explore ideas of contemporary and long-term time forms in relation to analog photographs. He later dabbled in the formalized art of numerical abstraction, experimenting with color lattices. Welu invited artist Neal White to help him make this work. White applied masks and outlines to flat color with pencil, then superimposed these on top of each other to create optical illusions on color plates. White had also been inspired by Piet Mondrian, and his experiments with Dalmation printing were similar to Welu's early experiments in collage. In 1977, alongside his creative works, Welu trained as an artist at the New York Academy of Art. He attended lectures on the color aesthetics of the Spanish artist William Rogers with Dr. Katy Pace. Rogers was another disciple of Mondrian and the term "color block" comes from his works. Pace was an Assistant Professor at UCLA, and introduced Welu and White to the then-new 3D technology of AutoCAD. In 1978, Welu started a computer art studio in New York, focused on Visualization, Design and Advertising through a series of Digital-Numerical Sequenced Illustration and Typographic works. He invented an interactive visual algorithm called "VVVV," also often called "the world's first color shipper," in which the coordinates and data of colors are converted into a digital form that can be edited, manipulated and repeated at will. A later iteration of VVVV employed "Fast Color Poisson" to establish a numerical basis for a new field of work: Color by Number. In the 1980s, Welu began to collaborate with Neal White and Hal Foster. Eventually, their
